2023 Auditing Plan for FCM

Master data Auditing Target

■ Objective:

1. Make sure the Master Data KPIs which collected from SAP system are **true/reality**
2. Make sure the Master Data KPIs calculating process of SAP system are **correct**
3. Maintain the Accuracy and Consistency

- ## ■ Results:
- We are 100% confident with the Master Data KPIs that collected from SAP Plant level, and we could trust the centralized KPI Dashboard showing weekly like below

Accuracy result - explanation

- **Accuracy means :**

- the data value is the correct one.

- **Some examples :**

- Minimum lot size is equal to production batch constraint on the shopfloor.
 - Parts weights are equal to the real weights.

Consistency result - explanation

■ Consistency means :

– the data format is correct or that the data is correct compared to other data.

■ Some examples :

- Rounding value is matching with packaging quantities
- Parts weights are similar on material master (MM03) and purchasing schedule agreement (ME32L)
- MRP profile is aligned with the part classification (meaning finished good is setup as finished good, component is setup as component).

2023 Auditing Plan for FCM

Master data Auditing Plan of 2023

■ Auditing Tools involved:

1. Materials List of auditing should be prepared to be compared the truth/reality number vs. SAP number
2. RPA robot could automatically retrieve data from SAP system

■ Auditing People involved:

1. One delegate from DRF team will take the lead of the annual auditing plan, and he/she will be also needed to track the auditing process through the camera
2. RPA team will take charge of RPA robot operation
3. Division and Plant support will be needed correspondingly

Master data Auditing Plan of 2023

■ Auditing Process:

1. Prepared material lists of auditing for plants and send file before starting audit process
2. Count the number and check the authenticity of the current SAP result
3. Enter random number in the SAP system to check the calculation process is correct

■ Auditing Year Plan:

77 Plants
2 Auditing per plant per year
43 rest work weeks of 2023 (W08 to W50)

Note: W06 and W07 will test the RPA tools and confirmed with division of the auditing time

$$(77*2)/43= 3.58$$

Involved upcoming day-off and vacation,

We would audit 3 plants per week having day-off,

We would audit 4 plants per normal week

$$8+(43/2)=29.5$$

W30 will be the mid-term of the auditing

=> Until 24th July, all 77 plants should already be audited one time

■ Auditing Year Plan in general view: Feb to Jul
